

# Netbased registration of enterprises, Norway

An overview and demonstration

By

Kurt Stian Fagerbakk

Executive Officer

The Brønnøysund Register Centre

# What is netbased registration?

- Users can, with their own computer and through the Internet, fill out and transfer information to the register

# Some basic information

- Based on a generic, platform-independent, scalable and reusable development-framework
- Use XML as a standard for the exchange of information on enterprises
- Use only HTML4 and some JAVASCRIPT, which means that the end-user only needs to have a regular webbrowser that support HTML4 and JAVASCRIPT and access to the Internet to use the system

# The design of netbased registration

- Based on a draft from a project called ELMER
- The draft is based on interviews of several enterprises
- funded by The Confederation of Norwegian Business and Industry (NHO), The Confederation of Norwegian Commercial and Service Enterprises (HSH) and Ministry of Trade and Industry (NHD)

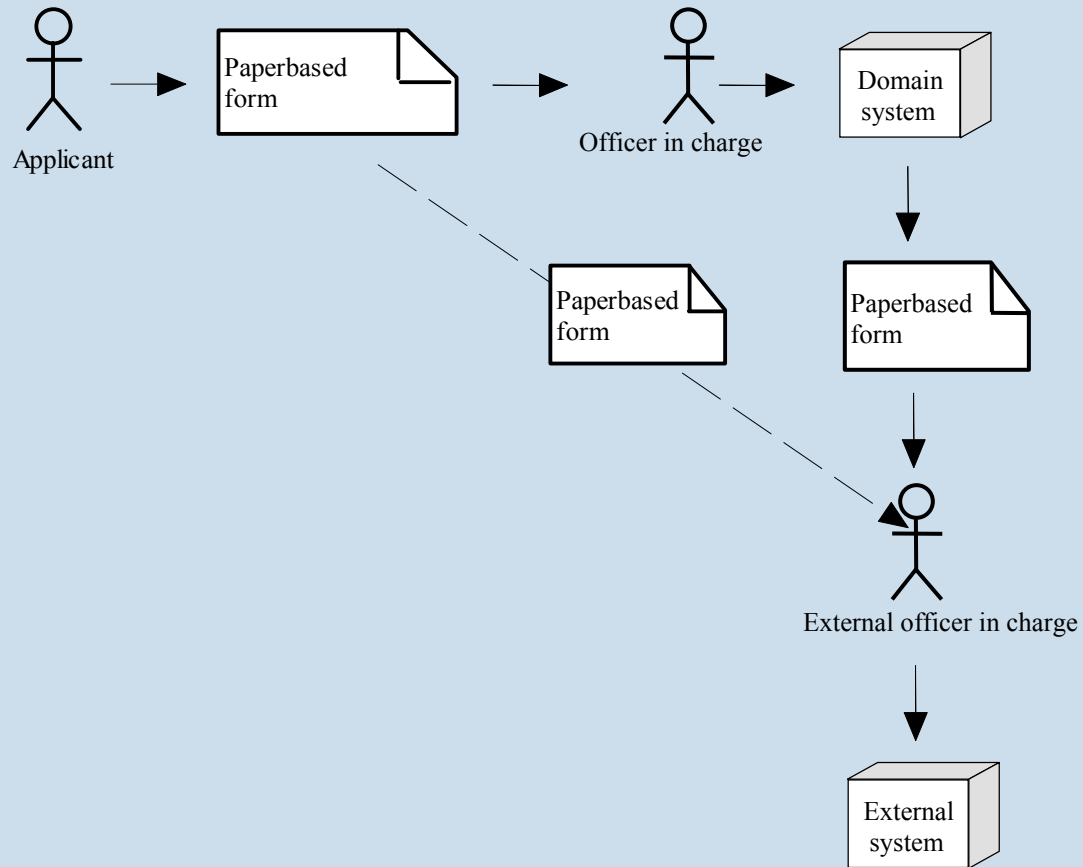

# Digital signature

- Digital signature is not implemented in this version, but is tested and works
- Will be installed later when there are more serviceproviders on the market who can offer services as a trusted third party (TTP)

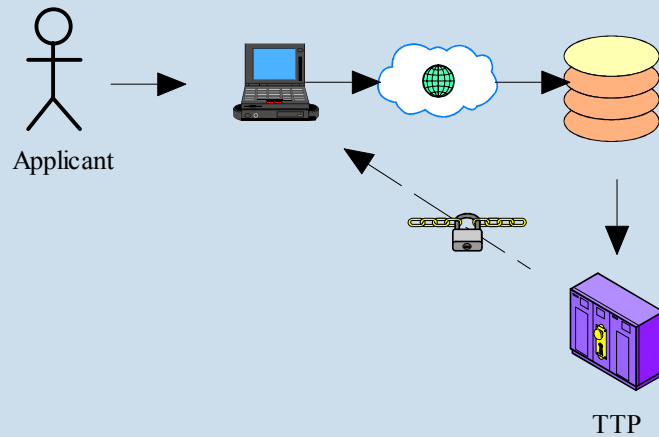

# How does netbased registration work?

- End-user fill in information in a client system through the Internet
- The client system guides the users through dialogue
- The client system verifies the information given by the user against control procedures in the internal registration system (domain system)
- End-user signs the transmission
- The transmission is transferred to the domain system
- Information can then transfer to external systems such as The Value Added Tax Registration List and The National Bureau of Statistics

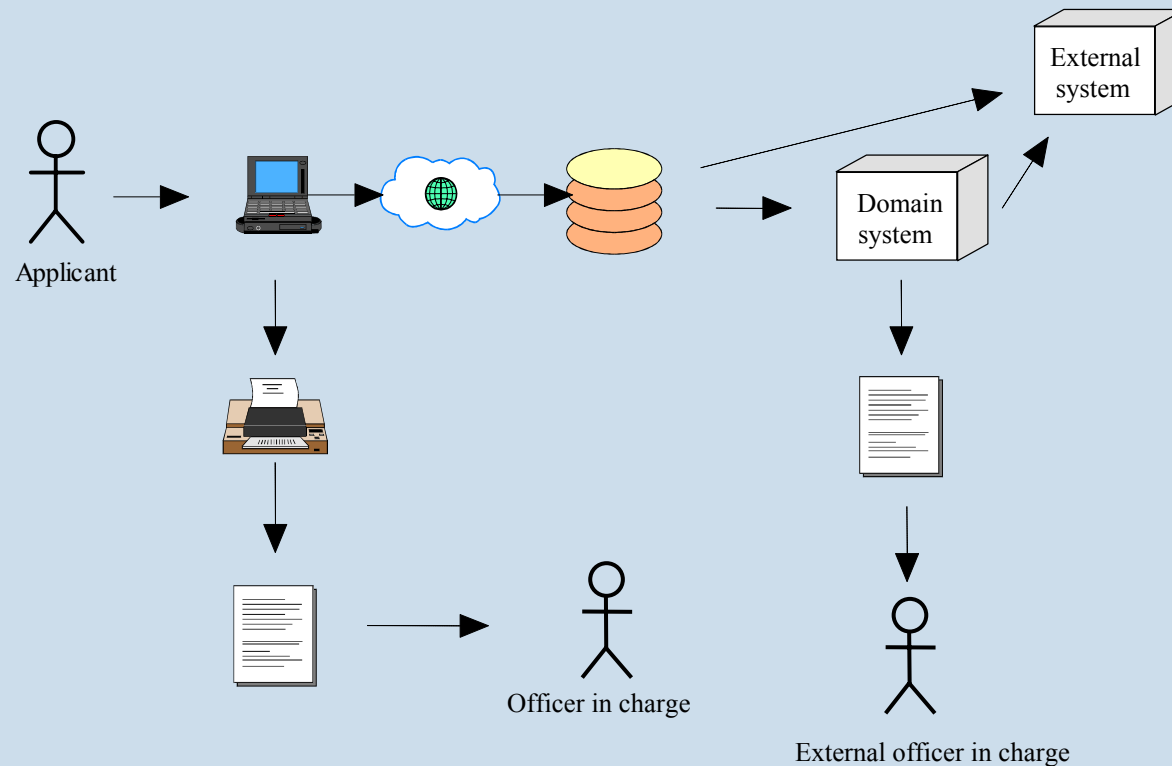

# The flow of information today

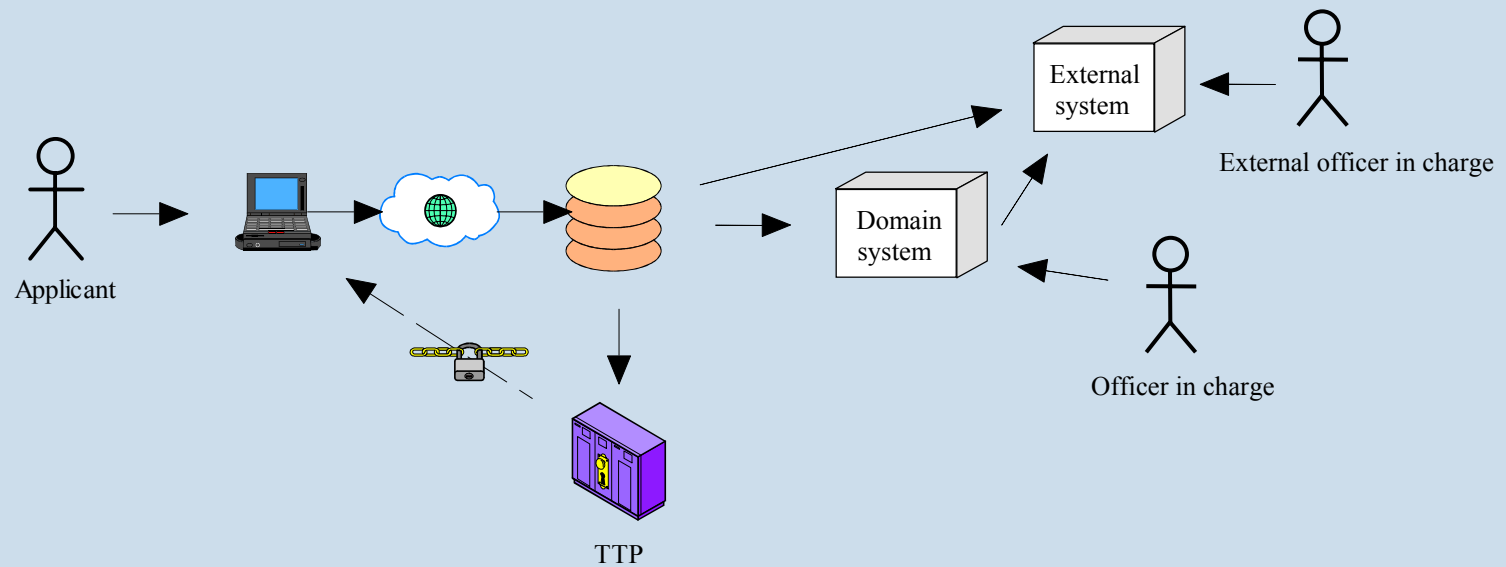

# Flow of information with netbased registration

# Flow of information with netbased registration

# Flow of information with netbased registration

# Participants in the project

- A collaboration between Norway Registers Development (NRD) and The Brønnøysund Register Centre (BRC)
- Organized as a " Research and Development-project" partly funded by The Norwegian Industrial and Regional Development Fund (SND)
